EHR Systems

The AQUA Registry uses the FIGmd platform to integrate with and extract from your electronic health record (EHR) systems. Once your EHR has been integrated with the AQUA Registry, data from your practice can be seamlessly extracted to generate performance reports for CMS reporting or other quality improvement purposes.

FIGmd has completed system integration with more that 50 major EHRs and is capable of working quickly with new systems.

Below is the list of EHRs that are used by current AQUA Registry practices.

KEY

EHR: Electronic Health Record System used in the practice to document clinical data
Integrated: EHR integration status with the AQUA Registry
Data access: How the EHR lets you, and in turn, the AQUA Registry, access your data
Type: How the EHR hosts your practice data
Vendor fees: Practices have reported an additional vendor fee for transmitting data to the AQUA Registry

EHRs	Integrated in AQUA	Type	Data access	Vendor fee
Allscripts (Professional & Touchworks as well)	Yes (non-cloud only)	Server	Pull/Push	
Amazing Charts	Yes	Server	Pull	
Varian- Aria	Yes	Server	Pull/Push	
Athena	Yes	Server	Push	
Care 360	Interface not finalized
